

# CageGuard Protector™

## Skylight Protection

***The Best Non-Penetrating Solution for Guarding Skylights Yet!***

The CageGuard Protector Skylight Guard is the perfect fast-install, low-cost solution to guarding skylights and temporary roof openings. Free-standing, non-penetrating design allows every company the ability to install an OSHA compliant barrier without the need for specialty contractors, penetrating the roof membrane or compromising the skylight structure by fastening a mechanically attached permanent system to it.

**Install OSHA Compliant Skylight Protection in Under an Hour!**

CageGuard Protector from Garlock  
Patent Pending

## Skylight Protection

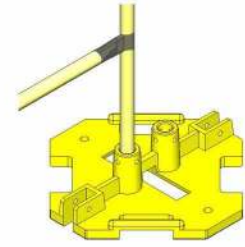

The Best Non-Penetrating Solution for Guarding Skylights Yet!

Free-standing standard model features adjustable height legs with 114 mph wind uplift rating. System features complete no-touch protection with Cat. 2 Hurricane rating.

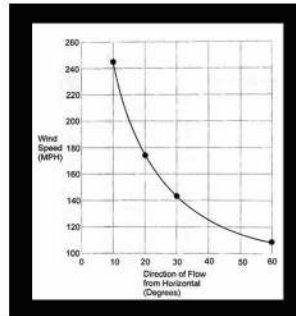

Optional slip-on stack plate kits add 18 mph of wind rating per layer of plates added. Four layers of stack plates raise wind rating to 185 mph far exceeding Cat. 5 Hurricane winds. System features complete no-touch protection.

Optional 108 lb. cast iron base plates used with our railguard systems is another no-touch, heavy-duty mounting option. Highest wind rating available.

Standoff kits slide onto CageGuard frame and securely clamp against two diagonal corners of skylight frame without penetration. You'll lose the skylight before you'll lose the guard.

Even unweighted system stays in place in extreme wind conditions. Combined with standoff kit or weighted bases, the set-in-place CageGuard system performs like permanent models.

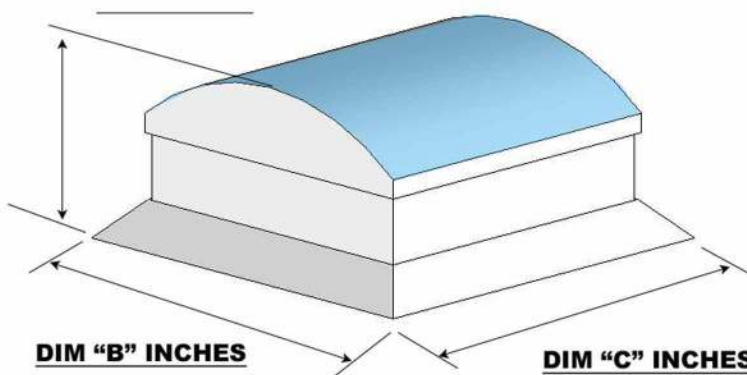

The CageGuard Protector System is the simplest, fastest, most economical way to guard skylights and roof openings.
