## Power Roller

### Roller Boss™

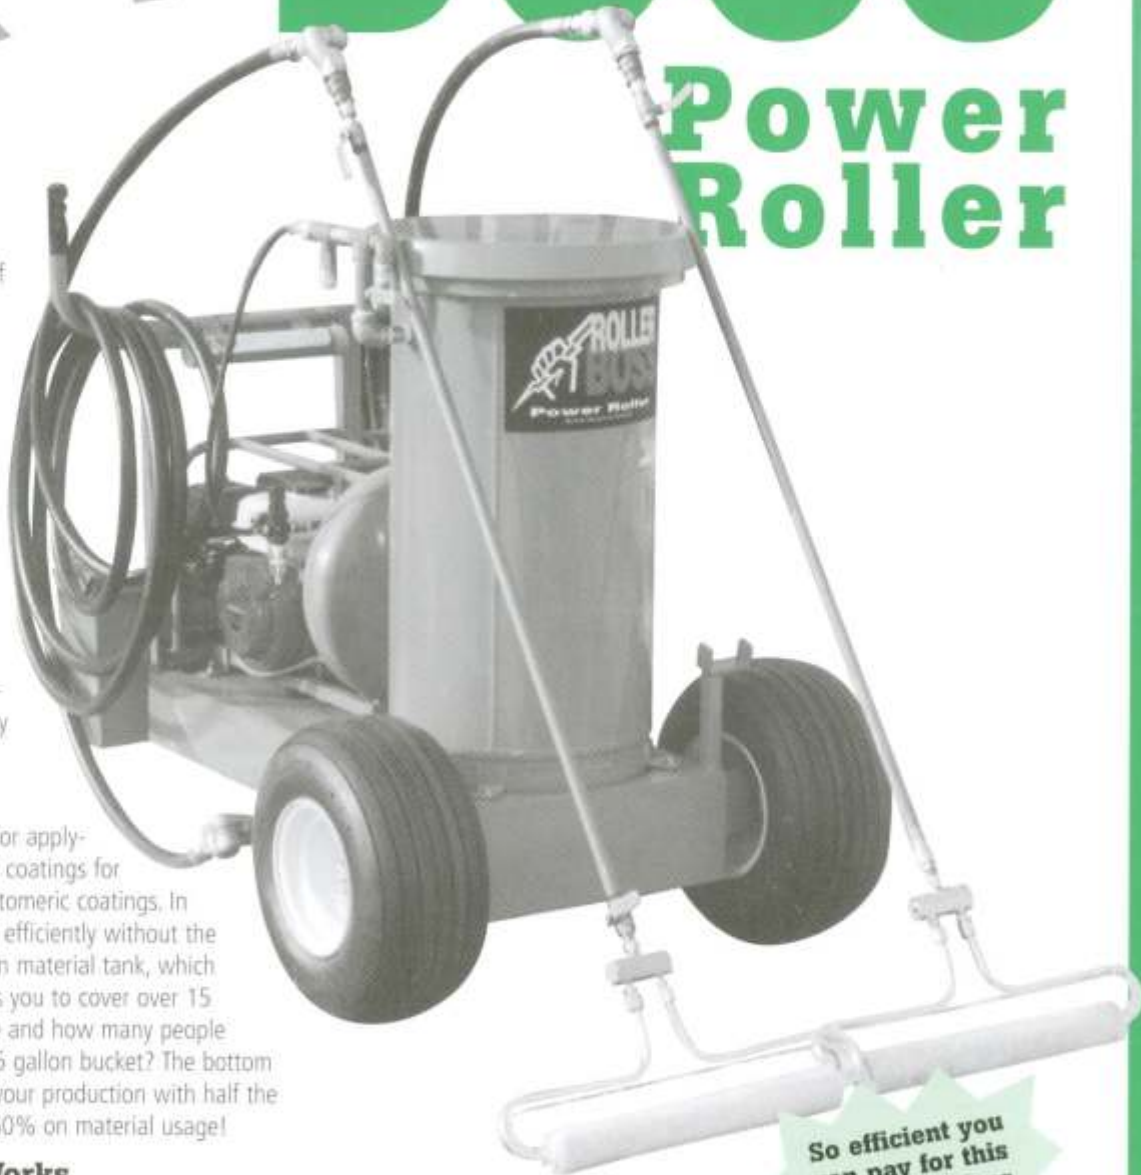

Roller Boss from Garlock, as the name implies, puts you in charge of power rolling your cold process materials. Roller Boss is hands down one of the most important labor-saving, cost-saving pieces of equipment we build. Roller Boss not only reduces the amount of material you consume, but also applies it much faster than traditional dip and rolling from a pail. Roller Boss has been totally redesigned to deliver rock-solid construction, better features, and top performance to keep your company well on the side of profitability and success.

### The Perfect Machine

Roller Boss is the perfect machine for applying contact adhesives, primers, roof coatings for asphalt and even aluminum or elastomeric coatings. In fact, you can't do this type of work efficiently without the aid of Roller Boss. Our big 25 gallon material tank, which holds 20 gallons of material, allows you to cover over 15 squares on one fill. How much time and how many people would it take to dip a roller into a 5 gallon bucket? The bottom line is this. Roller Boss can double your production with half the labor and end up saving you over 50% on material usage!

### How the Roller Boss Works

Roller Boss works by pumping material from the pressurized tank down two 30' hoses to the roller heads. The perforated rollers dispense material evenly, resulting in a uniform application without hotspots or wasted material and leaving your crew with a professional looking job when you're finished. Maintenance is also kept to a minimum. Keep the tank sealed and the rollers covered and you can leave the Roller Boss with material in it almost indefinitely.

So efficient you can pay for this machine in less than 500 squares.

## What You Can Do With Your New Roller Boss

Roller Boss is perfect for many different jobs. Fully adhered EPDMs, seam sealing, reflective roof coatings over many different substrates and primer applications. Add to that the variety of materials Roller Boss can handle and the value of this machine shines through.

- Aluminum Coatings (non-fibrated)
- Asphalt Coatings (non-fibrated)
- Concrete Primers
- Light Elastomeric Coatings
- EPDM Adhesives

### Model 25T Roller Boss

features a 25 gallon material tank. Simply pour in, close the seal, and pressurize. You'll have 20 gallons of useable capacity. That's enough to fully adhere a 20' x 80' square roll of rubber.

### Built-in compressor

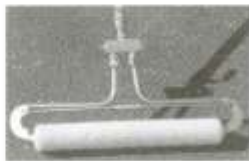

maintains the material tank pressure. The compressor can even be removed for other applications.

**4 hp Honda engine** with oil alert drives the compressor.

**Swivel fittings** on both ends of the hose allow the operator complete freedom of movement. Shut-off valve gives the operator complete control over the amount of material being applied.

Heavy-duty **30' material hose** is made to withstand the harsh chemicals and abrasive nature of EPDM solvents.

**Roller heads** come in many sizes. 3", 4", 6", 9", 12", and 18" are available for just about any application. Hoist right to the roof and keep two operators busy for maximum production and efficiency.

In situations where gasoline engines are not allowed, we offer a power roller with a built-in CO<sub>2</sub> tank called the **302 Power Roller**. The 302 Power Roller delivers the same performance as the 301 Series except that it only has one material hose and roller. The CO<sub>2</sub> tank can be refilled at any gas supply house and typically can last up to 50 squares.

## Optional Equipment

Roller Boss is available with a removable "split-top" material tank called the **25ST Roller Boss**. This split feature allows you to open the material tank for periodic cleaning and inspection.

**Storage box** for rollers helps keep the roller head useable for an extended period of time.

## Roller Boss Specifications

Weight (25T model)	.....342 lbs.
Weight (25ST model)	.....430 lbs.
Length	.....52"
Width	.....38"
Height	.....45"
Engine	.....4 hp Honda
Std. Operating Pressure	.....60-80 psi
Material Hose	.....30 feet
Roller Head Options	.....3", 4", 6", 9", 12", 18"
