

Roof Cutters

DUST MASTER™ ULTRA CUTTER

DUST CONTROL SAFETY, ULTRA CUTTER QUALITY

Count on the Dust Master™ Ultra Cutter from Garlock for clean air and a clean cut. The unique Dust Master protection system fit on the Ultra Cutter sets the industry standard for dust control on roof cutting operations. The powerful 9 hp Honda overhead valve engine delivers the same smooth, dependable performance you demand from the Ultra Cutter. And the Dust Master protection system effectively controls dust and hazardous particulates before they become airborne, protecting the safety of your crew.

DESIGNED TO DOWNSIZE DOWNTIME

The Ultra Cutter is engineered to minimize downtime. For easy on-deck maintenance, you can lift up the blade guard to inspect or change blades. To change the belt, simply slide the engine forward and lift the belt off the blade shaft. Loosening one bolt exposes the entire spray assembly for easy cleaning.

FLEXIBILITY FOR EVERY JOB

For jobs where protection from friable elements is unnecessary, the Dust Master system detaches easily from the Ultra Cutter. Slip off the vacuum and spray systems, attach the provided standard blade guard, and the Ultra Cutter is ready to go.

The Dust Master protection system reattaches just as quickly.

GARLOCK
EQUIPMENT COMPANY

DUST MASTER™ ULTRA CUTTER

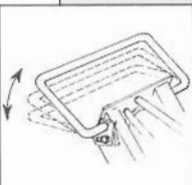

SPECIFICATIONS:

Length	60"
Width	28"
Height	36 3/4"
Weight	270 lbs.
Handle Adjustment	34 1/2" to 41"
Engine	9 hp Honda overhead valve control
Two (2)	12 x 3.00 x 3/4" wheels
Two (2)	6 x 1.5 x 1/2" guide wheels
One (1)	10 x 2.75 x 5/8" wheel

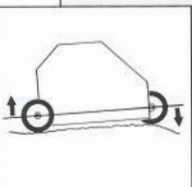

Air Quality Features:

Water dampening system
Three stage filter system
HEPA air filtering system

Productivity Features:

Floating blade guard
9 hp Honda overhead valve engine
Adjustable handle
B-width belt with quick-change feature

Safety Features:

Taper-lok bushing to secure belt pulley
Balanced weight distribution

The Garlock Dust Master Ultra Cutter conforms to Federal Register Vol. 59, No. 116 Rules and Regulations 40 CFR Part 61 NESHAP Interpretative Rules Subpart M: Section III 3.A.3

Always wear an approved respirator in all dusty conditions and have air quality test equipment available to check for hazardous substances before personal harm can occur.

Garlock Technology Answers Your Safety Concerns

No roof cutter protects workers from dust and hazardous particulates (including asbestos) better than the Dust Master Ultra Cutter from Garlock. The Dust Master Ultra Cutter uses two independent particle control systems to ensure that the air at a worksite remains completely safe to breathe.

Protection Begins With A Water Barrier

Cutting a roof creates a powdery dust (called "friable elements") that most cutters blow into the air. Not the Dust Master Ultra Cutter. A spray mechanism inside its blade guard showers friable elements with water, forcing them safely back onto the roof. Garlock's engineers have designed a spray pattern so precise that it suppresses more than 95% of the friable particles inside the blade guard.

An Air Filtering System Adds Further Protection

An air filtering system aboard the Dust Master Ultra Cutter captures any friable elements that escape the water dampening system. A powerful vacuum installed inside the blade guard forces the air through a High Efficiency Particulate Air (HEPA) filter. The HEPA filter traps airborne particles down to 0.12 microns and safely stores them in a sealed containment bag. Working by itself, the air filtering system can remove more than 98% of the friable particles inside the blade guard. When combined with the water dampening system, it provides virtually 100% protection.

The Dust Master Ultra Cutter and all other Garlock products are and backed by the dedicated people that take pride in the quality products they build and the after-the-sale service they provide.

Ask your Garlock distributor about retrofit options available for your roof cutters. Or call Garlock direct at 1-800-328-9522.
